Communication and In-group Working Skills (cont.)

A 3D puzzle with one red piece standing out. The puzzle is composed of white and grey pieces, with one red piece in the center-right. The red piece is slightly raised and has a glossy finish. The background is a gradient from dark grey to white.

CHAPTER OUTLINE

3. The Psychology of Groups

A dark, semi-transparent background image showing a group of business professionals in a meeting. One person is pointing at a tablet screen, while others look on. The image is dimly lit, emphasizing the text overlay.

LEARNING OBJECTIVES

- Review the evidence that suggests humans have a fundamental need to belong to groups.
- Compare the sociometer model of self-esteem to a more traditional view of self-esteem.
- Describe how groups change over time.
- Apply the theory of groupthink to a well-known decision-making group

6. The Psychology of Groups

Most of us live out our lives in groups, and these groups have a profound impact on our thoughts, feelings, and actions.

What is the
psychological
significance of
groups?

“I must be myself. I will not
hide my tastes or aversions .
... I will seek my own”.
People can live separate and
apart from others!

They join with others
because groups meet
their psychological
and social needs.

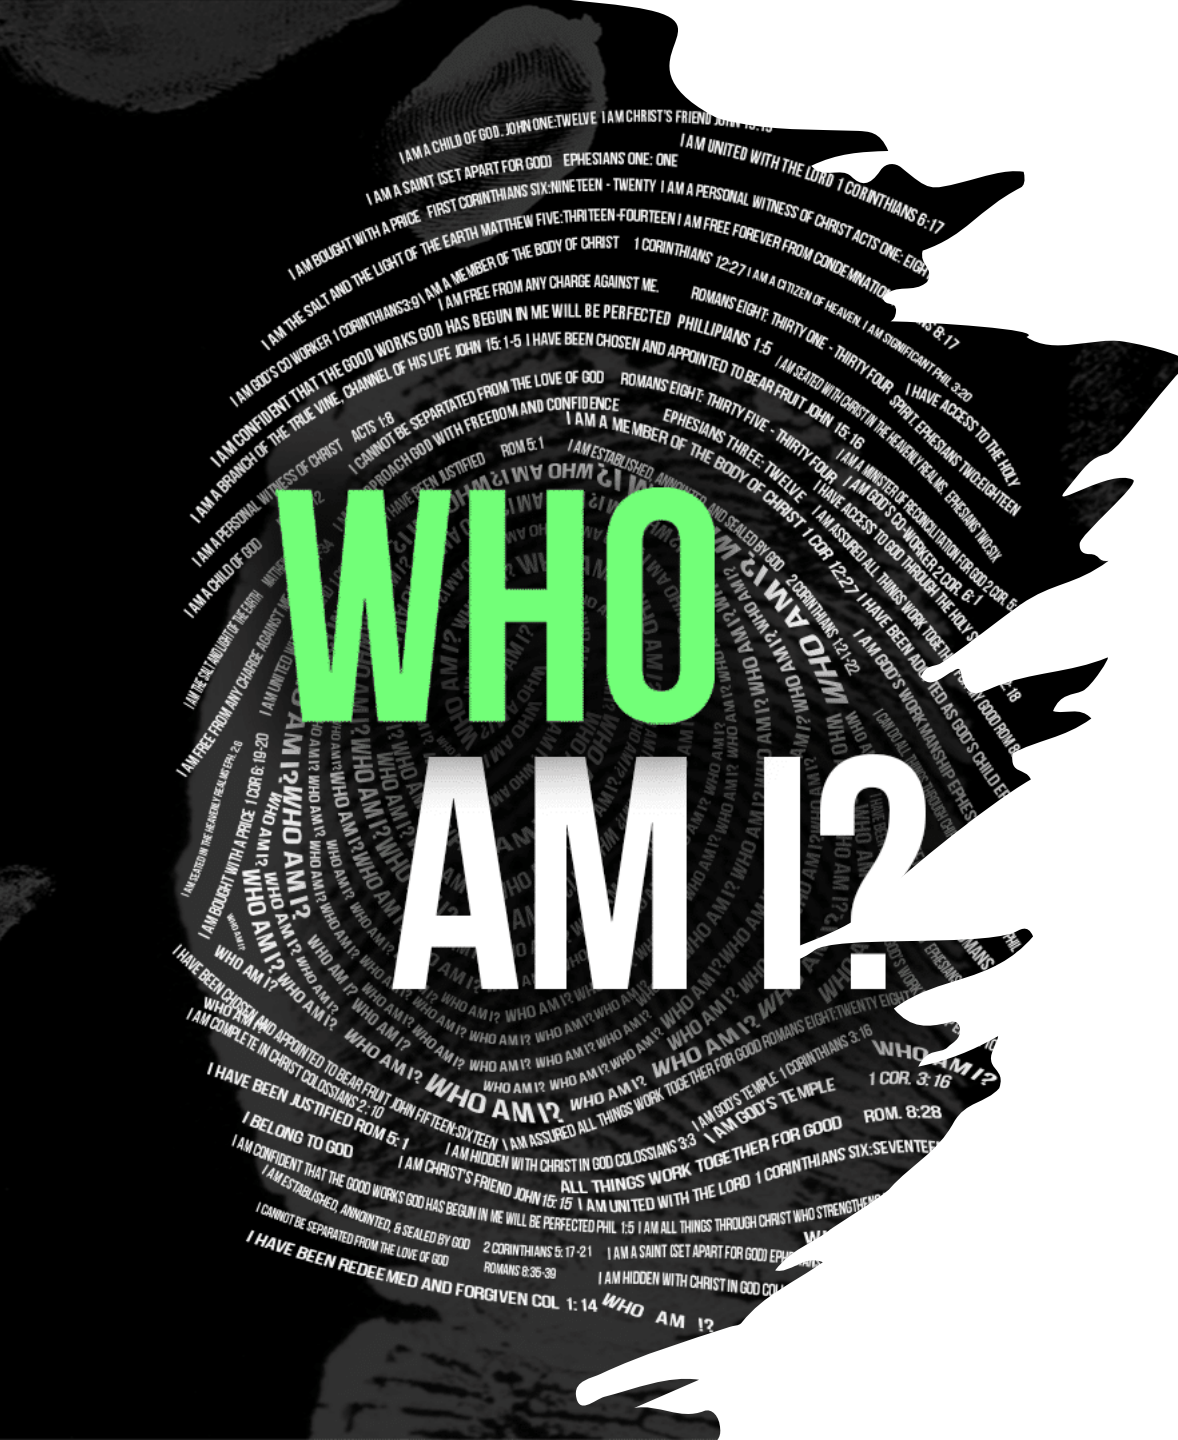

The Need to Belong

- **87.3% of Americans reported that they lived with other people** *such as family members, partners, and roommates (Davis & Smith, 2007).*
- **50% to 80%, reported regularly doing things in groups,** *such as attending a sports event together, visiting one another for the evening, sharing a meal together, or going out as a group to see a movie (Putnam, 2000).*

Affiliation in Groups

- Groups provide members with information, assistance, and social support.
- Leon Festinger's theory of social comparison (1950, 1954) suggested that in many cases people join with others to evaluate the accuracy of their personal beliefs and attitudes.

WHO AM I?

Identity and Membership

- Groups help us answer the existentially significant question, “Who am I?”
- People are defined not only by their traits, preferences, interests, likes, and dislikes, but also by their friendships, social roles, family connections, and group memberships.
- The self is not just a “me,” but also a “we.”

Evolutionary Advantages of Group Living

- Groups may be humans' most useful invention, for they provide us with the means to reach goals that would elude us if we remained alone.
- "People become dependent on one another for the satisfaction of their needs" (*Theory of social integration, Moreland*).

Motivation and Performance

- **Social Facilitation in Groups:** *Do people perform more effectively when alone or when part of a group?*
- **Social Loafing:** *Groups usually outperform individuals. “Many hands make light the work” (Littlepage, 1991; Steiner, 1972)*

But it can be a problem!

One way to overcome it is by recognizing that each group member has an important part to play in the success of the group.

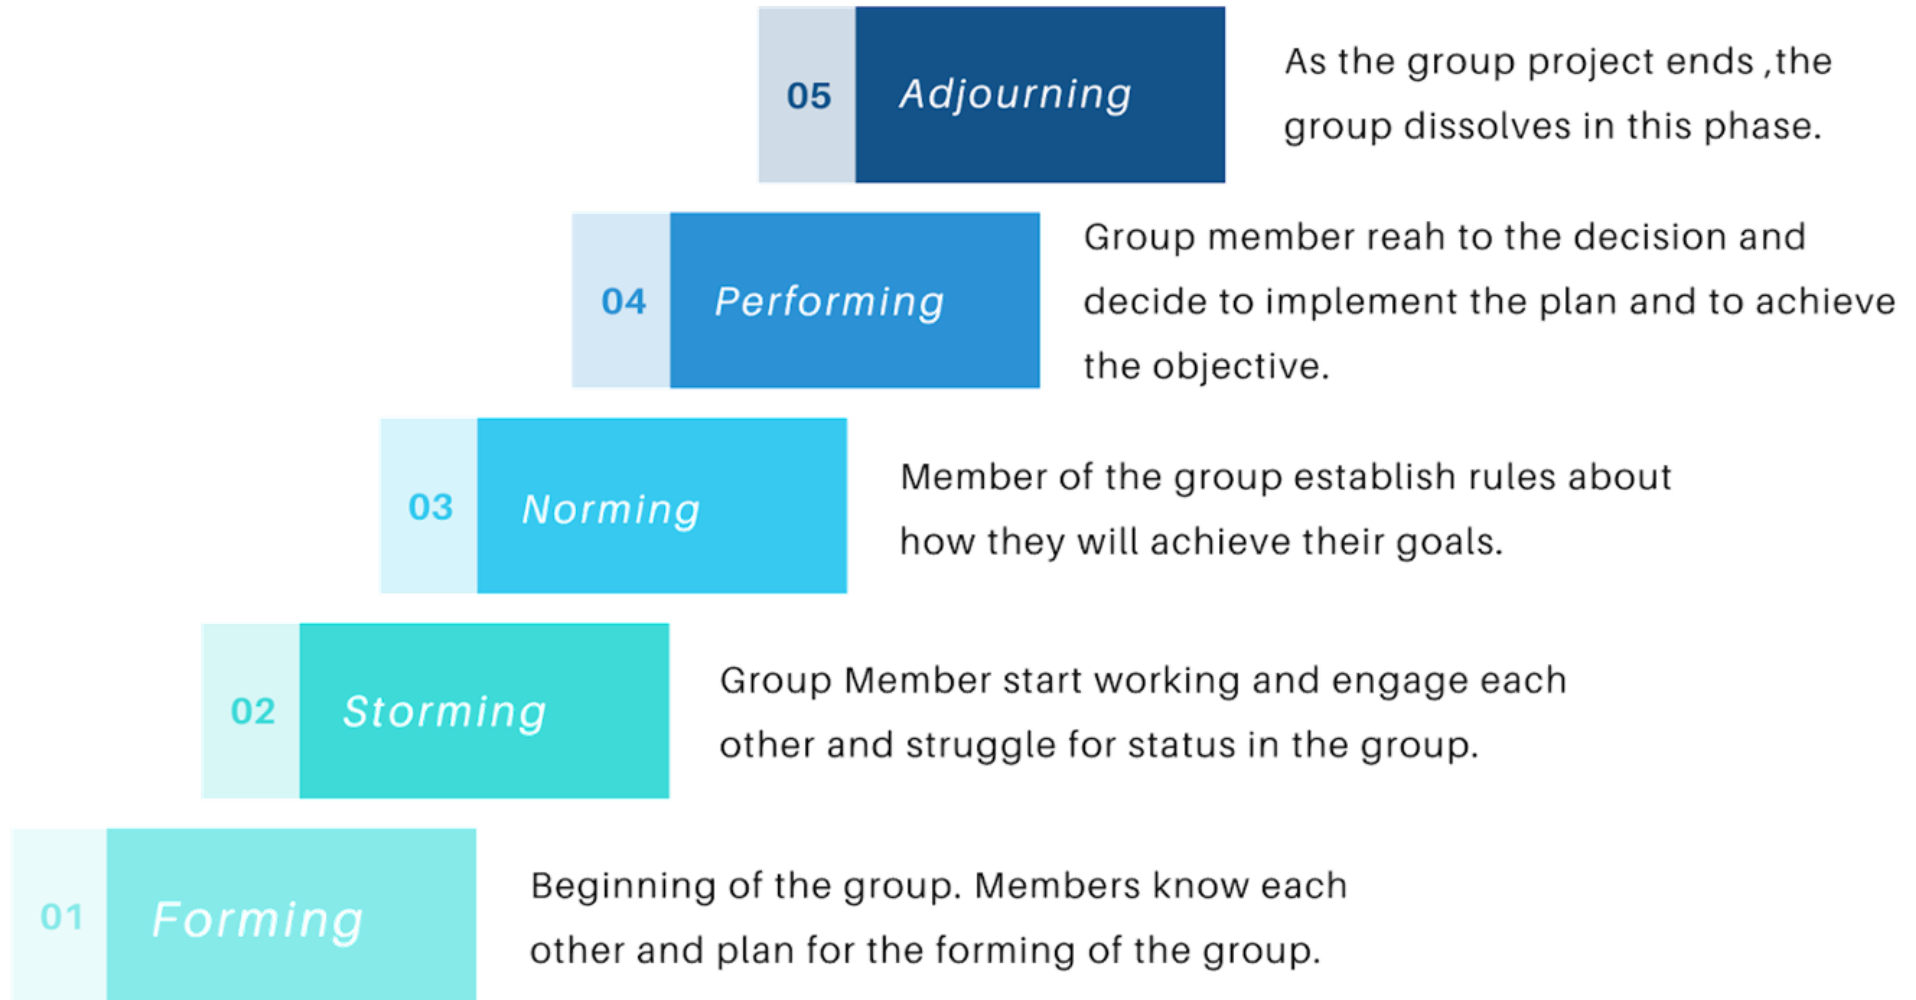

Teamwork

Researchers have identified two key ingredients to effective teamwork:

1. a shared mental representation of the task
 2. and group unity.
- Teams improve their performance over time as they develop a shared understanding of the team and the tasks they are attempting.

adjourning

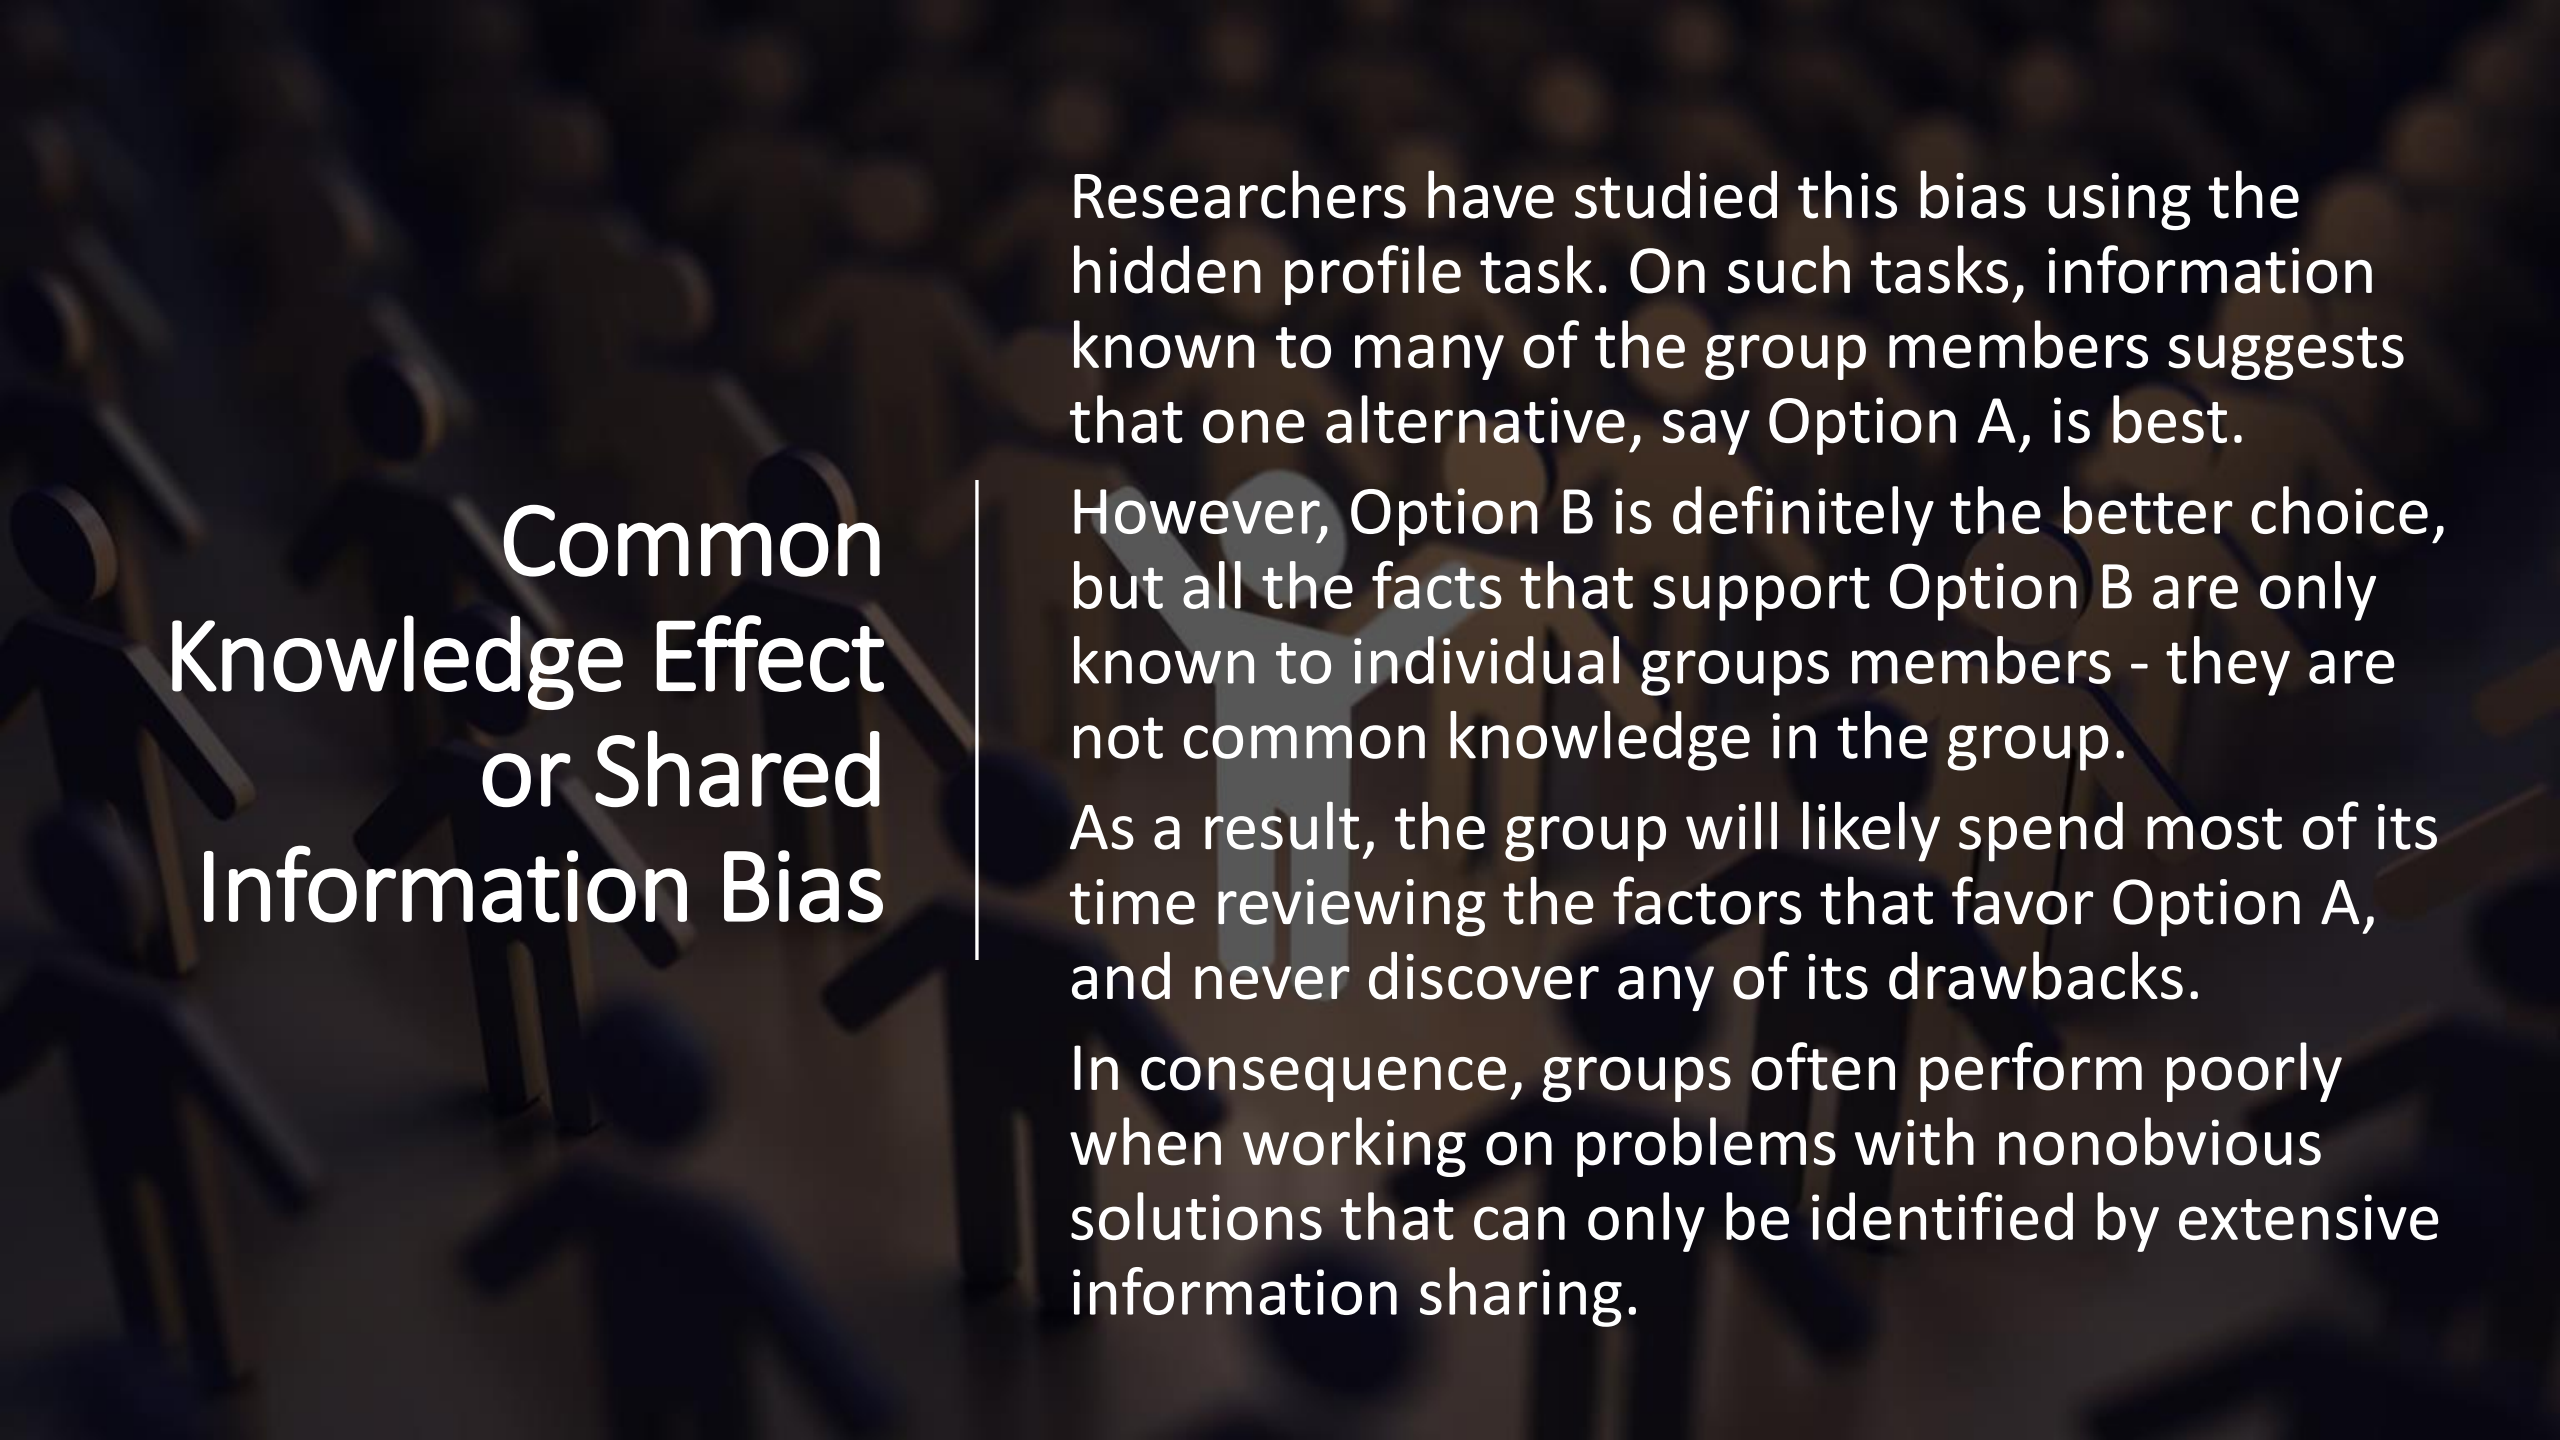

The background of the slide is a collage of overlapping, slightly tilted rectangular sticky notes in various colors including olive green, maroon, grey, and teal. Each sticky note features a simple black line drawing of a person's head and shoulders. The text 'Making Decisions in Groups' is written in a white, sans-serif font across the middle-left portion of the slide, with a thin white vertical line positioned to its right.

Making Decisions in Groups

- For groups can draw on more resources than can a lone individual.
- More ideas and possible solutions by discussing the problem.
- A group's decision will be superior to an individual's decision.
- However, groups do not always make good decisions

Group Polarization

- Common sense notions suggest that groups exert a moderating, subduing effect on their members.
- Many groups shift toward more extreme decisions rather than less extreme decisions after group interaction
 - *Let's say you are part of a group assigned to make a presentation. One of the group members suggests showing a short video that, although amusing, includes some provocative images. Even though initially you think the clip is inappropriate, you begin to change your mind as the group discusses the idea.*

Common Knowledge Effect or Shared Information Bias

Researchers have studied this bias using the hidden profile task. On such tasks, information known to many of the group members suggests that one alternative, say Option A, is best.

However, Option B is definitely the better choice, but all the facts that support Option B are only known to individual groups members - they are not common knowledge in the group.

As a result, the group will likely spend most of its time reviewing the factors that favor Option A, and never discover any of its drawbacks.

In consequence, groups often perform poorly when working on problems with nonobvious solutions that can only be identified by extensive information sharing.

Buzzle.com

Groupthink is a phenomenon where people tend to confirm with group decisions to avoid feeling outcast, leading to errors in decision making.

A large red speech bubble graphic with a white outline, pointing downwards. The word "Groupthink" is written in white text inside the bubble.

Groupthink

GROUPS SOMETIMES MAKE
SPECTACULARLY BAD DECISIONS.

**04 GROUP-LEVEL FACTORS THAT
COMBINE TO CAUSE GROUPTHINK:**

- **Cohesion**
- **Isolation**
- **Biased leadership**
- **Decisional stress**

Groupthink

Breaking groupthink

The background of the slide features a series of thin, curved lines in light gray and white, creating a sense of motion and depth. These lines are more prominent on the left side and fade towards the right.

You and Your Groups Discussion Questions

1. What are the advantages and disadvantages of sociality? Why do people often join groups?
2. Is self-esteem shaped by your personality qualities or by the value and qualities of groups to which you belong?
3. In what ways does membership in a group change a person's self-concept and social identity?

The background of the slide features a series of thin, light gray curved lines that sweep across the frame, creating a sense of motion and depth. On the left side, there is a prominent red graphic element consisting of a horizontal bar at the top and a larger rectangular box below it, which tapers to a point at the bottom, resembling a speech bubble. The text 'You and Your Groups Discussion Questions' is written in white within this red shape.

You and Your Groups Discussion Questions

4. What steps would you take if you were to base a self-esteem enrichment program in schools on the sociometer model of self-worth?
5. What are the key ingredients to transforming a working group into a true team?
6. Have you ever been part of a group that made a poor decision and, if so, were any of the symptoms of groupthink present in your group?
